PUNCTION: Seems to be involved in the correct timing of cell
separation after cytokinesis, as separation of mutant daughter
cells is delayed. Could either be an enzyme necessary for glucans-
degradation of the cell wall at the neck region between mother and
daughter cells or a requiatory protein controlling this metabolic
step. Exclusively expressed between the end of mitosis and early
G1; inactivated before cells pass start.

PUNCTION: Makes part of TFIID is a multimeric protein complex that plays a central role in mediating promoter responses to various activators and repressors. Potentiates transcriptional activation by the AF-2S of the retinoic acid, vitamin D3 and thyroid hormone...
